

From the Witch of Endor to modern geneticists

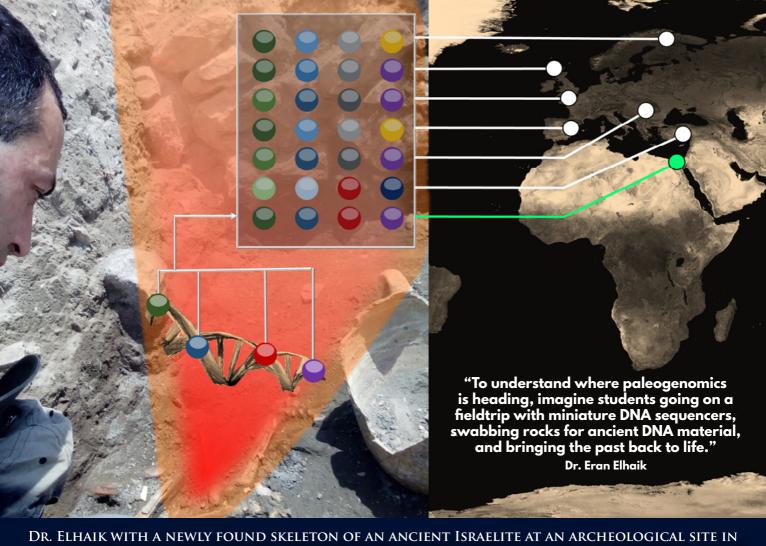

The desire to reconnect with people long bygone is as old as mankind. It touches upon our primal weakness, shared by all living creatures - mortality and our knowledge of it, which is unique to humans. In the past, sorcerers, prophets, shamans, and religious guides claimed to have the power to connect us with our ancestors and lost loved ones, and those who misused this power, like King Saul, were severely punished. Our craving to connect with our ancestors or to learn the stories of the deceased remained a part of our culture.

From the times of the Witch of Endor to humans never stopped imagining how to flip the arrow of time, even if only for a few precious minutes. Only the technology has changed. Recently, humans began harnessing the power of genetics to accomplish that.

experienced explosive growth. In 2011, a decade after the human genome was sequenced, Dr. Willerslev's team sequenced the first ancient human. A year later, Dr. Wells and Dr. Elhaik developed Geno 2.0, the first dedicated DNA ancestry test. In 2014, Dr. Elhaik created GPS Origins, a personalized DNA-tracing technology that pinpoints the geographical origins of one's parental ancestors, down to their villages. Half a decade later, Dr. Elhaik's team identified genetic mutations that trace ancestry over time and space, allowing modern people to connect with centuries old ancient people. In 2021, Dr. Elhaik and the Ancient DNA Origins team developed the first genetic test that can identify the tribal membership of individuals against dozens of ancient people while bringing forth their exciting stories.

WELCOME TO ANCIENT DNA ORIGINS.

Standard ancestry DNA tests are decades old now. They are based on the DNA of modern-day people and their beliefs about their past.

Ancient DNA Origins tests encapsulates the ancient DNA of the most fascinating historical people, their life stories, and their genetic legacies down to the individual warrior or artisan.

DISCOVER YOUR ANCIENT ANCESTRY

Over the past decade, there has been tremendous progress in our ability to extract ancient DNA from skeletons and mummies of the Hebrews, Vikings, Chumash Paleoindians, and many more cultures hundreds or thousands of years old.

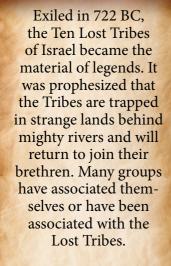

New technologies can analyze the ancient DNA of our ancestors and tell their stories, bringing them out of the history books and back into our lives. Did your ancestors hear the Sermon on the Mount? Were they exiled by the Assyrians along with their Israelite brethren? Using their DNA, we can find out and make their stories part of your story.

Because we measure your genetic similarities to your ancestors through mutations in the genes, we must remember that not all mutations were successful. Only those that have withstood the test of time were passed on to you. This will reduce your genetic similarity with your ancestor. Moreover, each of us has many ancestors from different tribes scattered throughout space and time. This makes your DNA a mosaic of ancestral tribes, cultures, and histories that you can now explore with the Ancient DNA Origins tests.
